A 3D model in a slide

The model on the right is a web page, shown in the slide by `demo::`.

- Drag to turn it, scroll to zoom
- three.js reads an OBJ file and its texture
- The page and the model sit next to the slide, in assets/
- In the PDF, an image of the model replaces it

Spot, by Keenan Crane (public domain)

The same model, in an iframe written by hand

An `<iframe>` is HTML: LHTML keeps it as written, with its size, its place and its attributes.
